

EBULLIENT

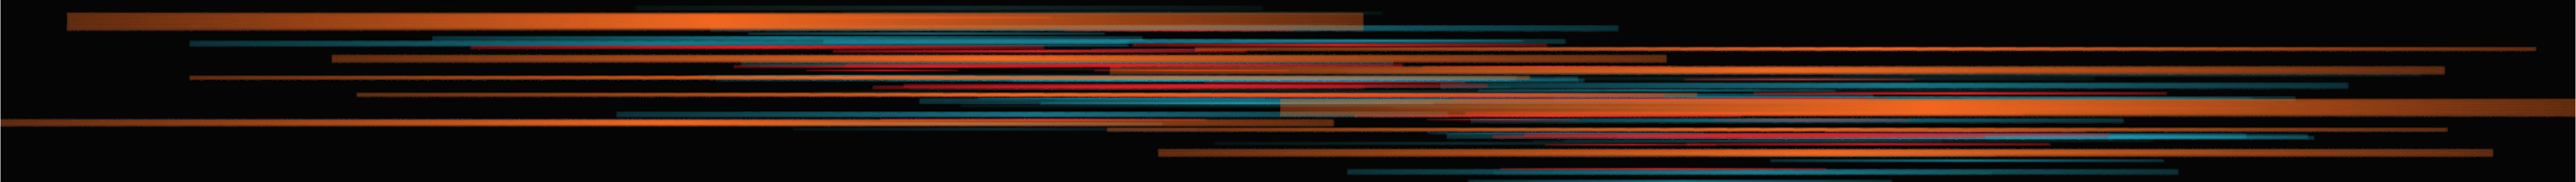

ABOUT US

Ebullient is an organization of young people having high moral values, deep technical knowledge, a plethora of unique offerings and options that excite our clients. Ebullient loves challenging the status quo, no matter what, and strives to offer jaw-dropping solutions that bring pleasant surprises and smiles on our client's faces.

Ebullient is very ethical in its approach. We believe we are in a Service business and not a Product business, which in turn gets reflected in the prompt services we provide.

Ebullient is spearheaded by four people having a collective experience of more than 40 years! We believe in changing lives by providing Technology, Luxury, Comfort & Happiness.

OUR MISSION

To strive to be the trusted partner for homeowners, builders, and architects, empowering them to create intelligent, adaptive, and responsive living spaces that transform the way they live, work, and play."

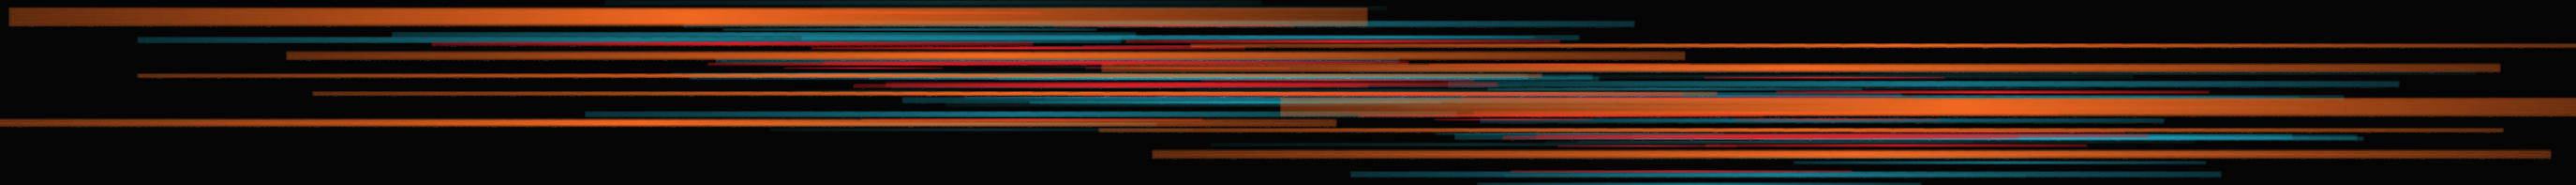

OUR VISION

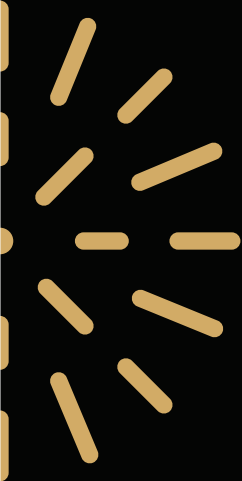

To revolutionize the way people live and interact with their homes, making every space smart, secure, and seamlessly connected, enhancing comfort, convenience, and sustainability for a better tomorrow.

OUR VALUES

Ebullient has three core-values that drives every single person associated with it, namely "Customer Obsession", "Future Driven", & "Always Curious"

HOME AUTOMATION

What Home Automation means today is exactly what cars were in the age of horse carriages. We do not realize it probably, but we are amidst a revolution – every single aspect of our life is changing and by leaps and bounds.

Automation today is not just control from your mobile or control using your voice, they both are a given. Using Automation, you can trigger things without your involvement. Things can be triggered based on the presence or based on weather or even your geo-location or a simple schedule. It can ease your work big time, making your life more convenient, more comfortable and adding the spice of luxury in your home.

MULTIPLE WAYS TO INTERACT

TOUCH

Simple and elegant operation interface, you can control the device with one click

VOICE CONTROL

Get things done using your voice over Alexa or Siri or Google Home, etc.

LINKAGE

Link events to certain device control.
Eg. If it is going to rain today, turn Philips Hue lamp to Blue and keep flashing.

APP CONTROL

Use our app to control your home with a user interface that makes it exciting to use

WIRED UNIFIED WITH WIRELESS TECHNOLOGY ON A SINGLE PLATFORM

Verticals

HVAC
Sensors & Security Systems
Human Centric Lighting
Blinds & Curtains
Audio-Video Systems

Compatible Brands

Lutron	Ring
Fibaro	OneTouch
Legrand	Hikvision
Philips Hue	Panasonic

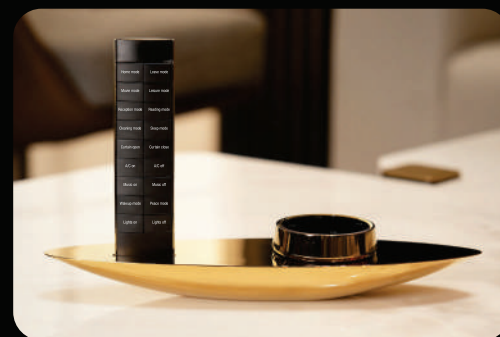

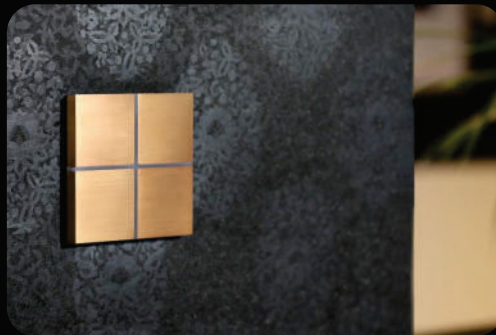

Services We Provide

Pre-configured e-Heart

Product Training

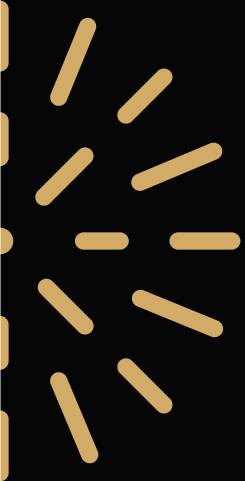

AUTOMATION KEYPADS

Most exciting thing about Automation is the look and feel of your keypads. From the basic ones to the ultra Premium ones, from wired ones to wireless ones, from wall mounted to table top, we have it all.

Your friends are bound to have their eyes pop out looking at the keypads we provide.

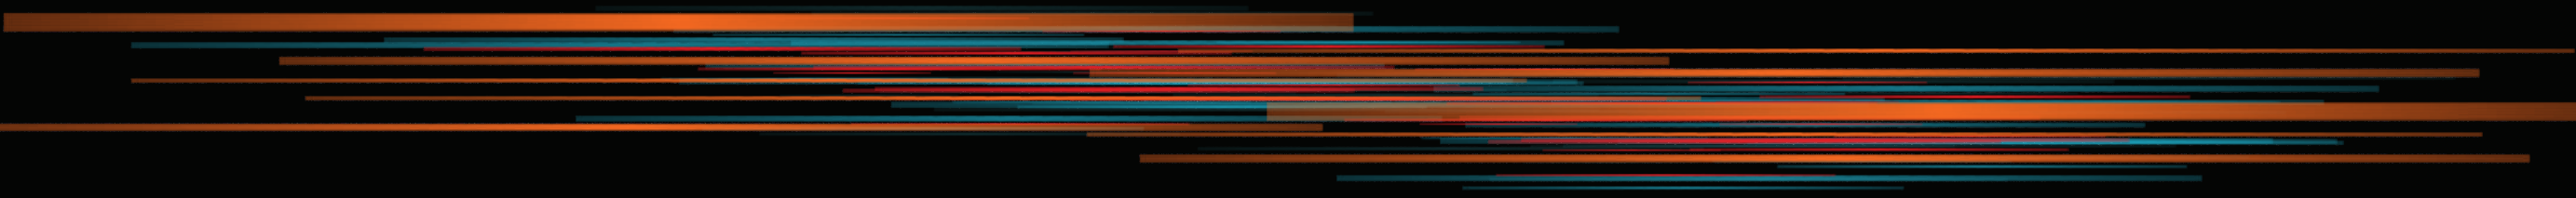

EXPERIENCE THE THEATER, AT HOME

The Covid pandemic taught us the hard way – if we cannot move out of our homes, the sources of entertainment are very limited.

That's when people started creating their own theatrical spaces. Be it their guest rooms, their own bedrooms or even living rooms, Theatres in a home are a perfect place to have family get-togethers, or friends coming over for a fantastic World Cup Final or even better, watch your OTT favourites all by yourself with amazing Dolby Vision visuals and thunderous Sound system with our expertise.

ARCHITECTURAL LED LIGHTS

Ebullient understands the language of architects and interior designers. We understand Color Rendering Index, the Color Temperatures and the Dimming, as well as anyone in the industry.

Architects & Interior Designers love the fact that we can offer astute technical advice when it comes to lights and provide products that enhance the designs, paints, textures, wallpapers or artefacts installed in a home.

Be it Indian or European, we know what would fit best for your needs and economy.

MOTORIZED CURTAINS / BLINDS

It all starts with Motors. Now we have motors to control the curtains or blinds. Be it horizontal heavy black-out curtains, double height curtains, Venetian blinds, Honeycomb blinds, Roman blinds or simple Roller blinds, it can all be controlled using motors. The motors in turn can be remote controlled or Automation controlled or even better, both.

Life has never been easier, especially with the German technology that goes into our motors.

Quiet motor noises
No louder than 35 dbs

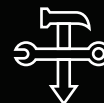

Smart controls for
Greater convenience

Hidden and discreet
wiring

High load capacity
curtain tracks up to 90kg

Low maintenance with
built-in safety mechanism

Manual operations
available

Pull to start function:
When energized, after pulling 5cms,
the curtain operate automatically.

Blocked to stop function:
During curtain operation,
it will stop automatically when
encountering obstacles.

Manual operation when
power off: Patented mechanical
clutch design, curtain is easier
to pull when power off.

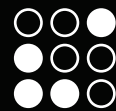

SMART LOCKS

The first thing that one generally forgets is the keys to the home. Now, do not worry, for your fingerprint is the key to your home, your world, just like how it unlocks your phone, your second world.

Locks, now do not look as boring as they once did. There are hundreds of exciting designs to choose from. It's almost a way of life to use fingerprints wherever possible. If that's not enough, your face too is the new key to your home. You won't have to move a finger.

VIDEO DOOR PHONES

Today's world has security threats from the unlikeliest of places. Our homes have to be secure by all means. Secure the entry lobby using our lobby station and secure your home using our video door phones, so that you can stop them either at the building entrance or even if someone managed to sneak in, stop them outside your home, by knowing who's at the door and what's the purpose of their visit.

Security is not the need of the hour, it's the need of this very second - be it your physical world, your home, or the virtual world, your phones.

Intrusion alarm-
in built motion sensor

SENSORS

Gone are those days where there used to be sensors that performed just one function, like sense motion. But the world has changed and how! This one sensor can sense motion, can sense presence, can track 5 people, can track sleep patterns, can track heart rates, can divide the room into 30 zones.

This doesn't stop there. The sensor keeps getting updates and new features are added frequently, features that probably we wouldn't have imagined. Automation is a small thing that we extract out of it. It simply does so much more!

Zone Positioning

By using only one radar sensor, you will be able to monitor a room of up to 40 m2 (ca, 430 sq.ft.) and divide them into various zones. Presence at each configured zones can trigger different automation.

Multi-Person Detection

The FP2 radar sensor has the ability to detect up to 5 people at the same time, making it a useful tool for household with multiple occupants.

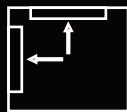

Ultra-High Precision

Radar sensor possess a high level of precision, allowing them to detect even the slightest movements without producing false positives.

Multi-Ecosystem Support

The FP2 is exposed as multiple sensors within third-party ecosystems, including HomeKit (and Home Assistant), Amazon Alexa, Google Home and Alice.

Flexible Placement

A recessed USB-C port and magnetic adjustable stand increases the flexibility of placement. Ceiling and vertical attachment are both supported.

Built-in Light Sensor

The FP2 has an extra built-in additional light sensor, which provides greater flexibility and enjoyment when creating lighting automation.

Local Automation

Automation of FP2 are executed without sending to the cloud, and they will keep working even in case of no internet connection.

Fall Detection & Alerts

The FP2 has the capability to detect and alert you when a family member falls down, which is not required for camera monitoring.
